

A Testimony

Early this spring our car developed some issues with the interior heating system. It started blowing cold air when the temperature gauge indicated that the engine was warmed up.

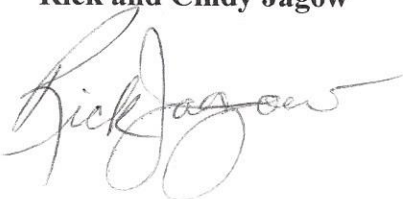

Suspecting that the coolant may be a little low I added some. This helped, but only for about a day. Needing more skilled eyes we took it to Master Radiator who have been our go to people for a long time. Steve's crew found a cracked thermostat cover which was replaced. Problem solved. Well not quite. A couple days later "The Problem" returned and brought a friend. This time the engine temperature started to increase as well. Returning our beloved convertible for another look-see was in order. THE NEWS was painful. The engine had some very serious internal problems and repair was not recommended. Steve offered two options. Option #1: A good used engine with a years warrantee, OR Option #2: A re manufactured engine from Jasper with a three year and 100,000 mile warrantee. The price difference was about \$1,000. Planning on keeping our RIDE for a lot more years, The decision was a no brainer. The Jasper engine was ordered. I expected to be without our favorite ride for several weeks. Not the case. We had it back in just over a week. (During that week the shop was out of power for two work days.) Steve called with the news that the car was ready to go and the cost was slightly more than our original estimate, but Steve warned us there could be other repairs once the project was opened up, but this was to be expected.

Taking our ride out on the road was a GREAT experience. It was smooooooth, quiet, and responsive. Now if the weather would just warm up life would be sweet!!!!

Thanks Steve and Crew, and Jasper for GREAT work.
